## Project Design Phase-II Technology Stack (Architecture & Stack)

| Date          | 17 October 2022  |
|---------------|--|
| Team ID       | PNT2022TMID22007   |
| Project Name  | Real - Time Communication System Powered By AI for Specially Abled |
| Maximum Marks | 4 Marks  |

## **Technical Architecture:**

Table-1 : Components & Technologies:

| S.No | Component                       | Description   | Technology  |
|------|---------------------------------|---|---|
| 1.   | User Interface                  | How user interacts with application e.g. Web UI, Mobile App, Chatbot etc.   | HTML, CSS, JavaScript / Angular Js / React Js etc.                |
| 2.   | Application Logic-1             | It deals with variety of frameworks, libraries and supports required to develop the project   | Java / Python   |
| 3.   | Application Logic-2             | Helps in converting human voice into written words, In simple it is used to convert speech totext.  | IBM Watson STT service  |
| 4.   | Application Logic-3             | Provides fast ,consistent and accurate answers during the execution phase of the project  | IBM Watson Assistant  |
| 5.   | Database                        | It can be numerical, categorical or time-series data  | MySQL, NoSQL, etc.  |
| 6.   | Cloud Database                  | Enables the user to use host database without buying the additional hardware  | IBM DB2, IBM Cloudant etc.  |
| 7.   | File Storage                    | File storage should be highly flexible, scalable and effective  | IBM Block Storage or Other Storage<br>Service or Local Filesystem |
| 8.   | External API-1                  | Used to access the information in the cloud   | IBM Weather API, etc.   |
| 9.   | External API-2                  | Used to access the information for data driven decision making  | Aadhar API, etc.  |
| 10.  | Machine Learning Model          | Machine Learning Model deals with various algorithms that are needed for the implementation   | Real time communication using AI for specially abled              |
| 11.  | Infrastructure (Server / Cloud) | Application Deployment on Local System / CloudLocal Server Configuration: Install the windows version and execute the installer Select APACHE to install web server | Local, Cloud Foundry, Kubernetes, etc.                            |

| Cloud Server Configuration :                  |  |
|---|--|
| This server deals with the additional storage |  |

## **Table-2: Application Characteristics:**

| S.No | Characteristics          | Description   | Technology  |
|------|--------------------------|---|---|
| 1.   | Open-Source Frameworks   | The frameworks used are   | Tensor flow, Theano, RNN, PyTorch, Caffle 2   |
| 2.   | Security Implementations | the security / access controls implemented, use of firewalls etc.   | Identify, Prevent aznd Respond  |
| 3.   | Scalable Architecture    | the scalability of architecture (3 – tier, Microservices)   | Data , models, operate at size, speed and complexity                                |
| 4.   | Availability             | the availability of application (e.g. use of load balancers, distributed servers etc.)                                    | Image and facial recognition, lip reading, text summarization, real time captioning |
| 5.   | Performance              | Design consideration for the performance of the application (number of requests per sec, use of Cache, use of CDN's) etc. | Full and effective participation, equality of opportunity, accessibility            |
